

SHADOW AI DISCOVERY & CONTROL

Shadow AI hides in four places. AccuKnox covers all four.

Employees paste company documents into chatbots. Developers install agents, SDKs and MCP servers on shared hosts. Coding assistants run in terminals with shell access. Most of it never reaches an asset register.

COVERAGE AT A GLANCE

FOUR SURFACES · FOUR INTEGRATION MODES

From the browser tab to the terminal

Full coverageBetaIn progress

01

SAAS AI CHAT & WORKFLOW APPS

Browser plugin

Stops company-sensitive documents from leaking into public AI chat apps.

COVERS

ChatGPTClaude.aiGeminiMicrosoft CopilotGitHub Copilot

Full coverage

THE RISK

Staff paste contracts, source code and customer records into ChatGPT, Gemini and similar tools, and the company loses control of that data.

CONTROLS

Block sensitive document uploadsMask PII, PHI & PCI dataStop secrets & confidential codePrompt & response audit trailAllow approved tools only (e.g. ChatGPT Enterprise)

HOW ACCUKNOX COVERS IT

A browser extension inspects prompts and file uploads before they reach the AI app, then blocks, masks or logs them against company policy.

02

VMS & CONTAINERS

Host scanning

Inventories every AI component running on your servers, managed or not.

PLATFORM SUPPORT

LinuxFull coveragemacOSFull coverageWindowsIn progress

Full coverage

THE RISK

Developers install agents, SDKs, MCP servers and local inference engines that never show up in cloud accounts or IAM logs.

DETECTS

AI/ML frameworks2,30872AI SDKs1,1809AI automation2966AI agents12412MCP servers531AI inference engines402AI gateways2528

HOW ACCUKNOX COVERS IT

Scans VMs and containers, fingerprints AI software across seven categories, and raises findings by severity in the AI asset inventory.

03

DESKTOP AI APPS & AGENTS

Desktop telemetry app

Shows which agents, tools and skills desktop AI apps actually use.

COVERS

Claude CodePopular desktop AI tools

Beta

THE RISK

Desktop agents such as Claude Code call tools, load skills and reach external services that no inventory records.

SIGNAL

OpenTelemetry + HTTPS

→DETECTS

Agents · Tools · Skills

Built on the open-source KubeArmor OTel adapter · [github.com/kubearmor/otel-adapter](#)

HOW ACCUKNOX COVERS IT

A desktop app collects the OpenTelemetry these tools emit, along with their HTTPS traffic, to identify the agents, tools and skills in use.

04

TERMINAL & CLI CODING AGENTS

CLI agent security

Puts guardrails on coding agents installed in developer terminals.

COVERS

OpenAI CodexKiroClaude CodeOther popular CLI agents

Full coverage

THE RISK

CLI agents run with the developer's shell access and can send source code, secrets and credentials to external models.

CONTROLS

Prompt injection & jailbreak protectionSecret & credential leak preventionConfidential code upload preventionPrompt & response forensics

HOW ACCUKNOX COVERS IT

A gateway proxy configuration routes CLI agent traffic through the AccuKnox prompt firewall for inspection and policy enforcement.

BROWSER · HOSTS · DESKTOP · CLI

Every surface reports to one AccuKnox Control Plane

One AI asset inventory

Managed and unmanaged AI assets in a single view, exportable as an AI-BOM in CycloneDX format.

One set of guardrails

Define data and usage policy once, then enforce it through the plugin, gateway and host sensors.

One audit trail

Prompt, response and detection records ready for investigations, audits and compliance reporting.
