AccuKnox

AccuKnox

vs

Wiz, Palo Alto Networks and SentinelOne

(CNAPP for AWS and Azure)

- Cloud posture
- Data and AI security
- Code scanning and CI/CD
- Runtime protection

16 October 2026

AccuKnox Native code scanners and open-source runtime, in one CNAPP

Pick AccuKnox for

- Native SAST, DAST, IaC, secrets and SCA[1,2,3]
- Open-source runtime enforcement with KubeArmor[4,5]
- Pay per module, run SaaS or on-prem[6,7]

CAPABILITY	AccuKnox	Wiz Wiz Cloud, Code, Defend	Palo Alto Networks Prisma Cloud, Cortex Cloud	SentinelOne Singularity Cloud Security
A Cloud posture				
Agentless cloud posture	Agentless, read-only, AWS and Azure[8]	Agentless, 2,800+ configuration rules[9]	Agentless posture in Cortex Cloud[10]	Agentless, 2,000+ built-in policies[11]
Compliance frameworks	33+ frameworks[12]	100+ frameworks[13]	Built-in and custom standards[14]	CIS, SOC 2, NIST, EU AI Act[11]
Attack-path context	Security Graph on AWS and Azure findings[15]	Security Graph, attack paths[16]	Graph rules find attack paths[17]	Tests which exposures are exploitable[18]
B Data and AI security				
Data security (DSPM)	✓ ACCUKNOX STRENGTH Scanner runs in your cloud account[19]	Agentless discovery, access governance[20]	Included in Cortex Runtime Security[21]	DSPM with attack-path context[18]
AI posture on AWS and Azure	Finds SageMaker, Bedrock, Azure OpenAI[22]	AI-BOM finds SageMaker, OpenAI[23]	Cortex AI-SPM inventories models[24]	AI models, services, data flows[18]
AI runtime guardrails	Prompt Firewall, ModelArmor, red teaming[22]	Detects prompt injection at runtime[23]	Prisma AIRS blocks prompt injections[25]	Prompt Security AI firewall[26]
C Code scanning and CI/CD				
SAST	✓ ACCUKNOX STRENGTH 14 languages on two engines[1]	Rule-based and agentic SAST[27]	✓ ACCUKNOX LEADS No native SAST in Cortex Cloud[3]	– NOT COMPARED
DAST	Four scan types, AI Pentesting (Beta)[2]	Red Agent includes API DAST, GA[28]	– NOT COMPARED	– NOT COMPARED
IaC, secrets, SCA, SBOM	IaC incl. Bicep and ARM, reads CycloneDX and SPDX[29,30]	IaC, secrets, SCA and SBOM[31]	IaC, SCA, secrets, CycloneDX export[32,33]	Secrets, IaC and image scans[18]
D Runtime protection				
Runtime prevention	✓ ACCUKNOX STRENGTH KubeArmor, open source, inline blocking[4,5]	eBPF Sensor blocks threats[34]	Defender blocks or alerts[35]	eBPF agent, automated response[36]
Cloud detection and response	Reads CloudTrail, auto-remediates[37]	Wiz Defend reads cloud logs[38]	Cortex Runtime Security lists CDR[39]	Hyperautomation for cloud events[18]
Where the platform runs	✓ ACCUKNOX STRENGTH SaaS, on-prem or air-gapped[7]	– NOT COMPARED SaaS, sold on AWS Marketplace[40]	✓ ACCUKNOX LEADS Enterprise Edition is SaaS[41,42]	– NOT COMPARED

Palo Alto Networks sells Prisma Cloud and Cortex Cloud. Its Prisma Cloud page now promotes Cortex Cloud.[43] Google completed its acquisition of Wiz on 11 March 2026. Wiz says it stays multi-cloud.[44,45]

A cell with no label covers the same capability. Green label: AccuKnox leads or has a documented strength. Grey label: not compared.

E What to buy first

Our suggestion for the scope you gave. Confirm it at kickoff.

ACCUKNOX MODULE	PRIORITY	WHY, FOR YOUR SCOPE	LICENSED BY
CSPM and KSPM	MUST-HAVE	Posture on AWS and Azure is the base ask	Cloud assets as units[6]
Runtime protection	MUST-HAVE	Continuous runtime protection is in scope	Worker nodes[6]
Code scanning and CI/CD	MUST-HAVE	SAST, IaC, secrets and SCA before deploy	Scanner tools[6]
DSPM	MUST-HAVE	Data security is in scope. Confirm the data stores in the POC	By quote
DAST and CDR	GOOD-TO-HAVE	Add once the first three are live	Scanner tools[6]
AI security	GOOD-TO-HAVE	Size it by your GenAI footprint	AI and LLM models[6]
SBOM generation	DEFER	You already use JFrog. AccuKnox can read CycloneDX and SPDX	Scanner tools[30]

Where AccuKnox leads

- SAST: 14 languages natively. Cortex Cloud has no native SAST scanner[1,3]
- Runtime: open-source KubeArmor with inline blocking[4,5]
- Data: the DSPM scanner runs in your account and only a findings file leaves[19]
- Deployment: SaaS, on-prem or air-gapped. Prisma Cloud Enterprise Edition is SaaS[7,41]

Check each one in the POC.

Small POC, after your internal approval

Posture — One AWS account and one Azure subscription, read-only.[8,15]

Data and AI — One S3 bucket and one Blob container. Add AI posture if Bedrock or Azure OpenAI is live.[22,46]

Code and CI/CD — One or two repositories: SAST, IaC, secrets, SCA. One JFrog registry.[47,48]

Runtime — KubeArmor on one non-production cluster or VM, with one block policy.[4,5]

A SaaS proof of concept runs about one to two weeks when the infrastructure is in place[7].

How the others license

- AccuKnox: custom quote, pay per module, no hard stop if the quota is exceeded[6]
- Wiz: base plans on AWS Marketplace, with Sensor, Code and Defend as add-ons[40]
- Palo Alto, Cortex Cloud: priced per protected workload, code security is an add-on[10,49]
- Palo Alto, Prisma Cloud: priced in credits[42]

Sources, read 16 October 2026

AccuKnox pages were read live on help.accuknox.com. Competitor pages are product pages, documentation, blogs and marketplace listings, read with Firecrawl. Wiz and SentinelOne technical docs need a login, so those columns use public pages only. "Not compared" means this comparison makes no claim about that cell. Each line is a short paraphrase of the cited page. Superscripts match the numbers below.
