SHADOW AI DISCOVERY & CONTROL

Discover Every Shadow AI. Secure Every Endpoint. Control Every AI Interaction.

Employees paste company documents into chatbots. Developers install agents, SDKs and MCP servers on shared hosts. Coding assistants run in terminals with shell access. **Most of it never reaches an asset register.**

AI TOOLS ACCUKNOX SEES AND CONTROLS

ChatGPT · Gemini · Claude · Perplexity · Cursor · Codex · Claude Code · Gemini CLI

Plus 100+ agents, SDKs, MCP servers, frameworks, inference engines, gateways and automation tools found on hosts.

COVERAGE BY SURFACE

From the Browser Tab to the Terminal

Full coverage · Beta · Risk

01 BROWSERS & CONVERSATIONAL AI — Browser Plugin — Full coverage

BROWSERS — EXPANDED

Chrome · Edge · Firefox · Safari

CONVERSATIONAL AI

ChatGPT · Gemini · Claude · Perplexity

THE RISK

Staff paste contracts, source code and customer records into ChatGPT, Gemini and similar tools. The company loses control of that data.

HOW ACCUKNOX COVERS IT

The extension inspects prompts and file uploads before they reach the AI app. It blocks, masks or logs them against company policy.

- Sensitive upload blocking
- PII, PHI & PCI masking
- Secret prevention
- Prompt & response auditing

02 HOSTS, VMS & CONTAINERS — Host Scanning — Full coverage

PLATFORM SUPPORT

Windows	NEW	Full
Linux		Full
macOS		Full

THE RISK

Developers install agents, SDKs, MCP servers and local inference engines that never show up in cloud accounts or IAM logs.

HOW ACCUKNOX COVERS IT

Scans hosts, VMs and containers. Fingerprints 100+ Shadow AI tools across seven categories and ranks findings by severity.

- AI asset inventory
- Vulnerability findings
- Severity-based prioritization

03 TERMINAL & CLI CODING AGENTS — CLI Coding Agents — Full coverage

COVERS — EXPANDED

Cursor · Claude CLI · Codex · Gemini CLI · Other CLI agents

THE RISK

CLI agents run with the developer's shell access. They can send source code, secrets and credentials to external models.

HOW ACCUKNOX COVERS IT

Supported CLI agent traffic routes through the AccuKnox Prompt Firewall, which enforces policy on every prompt and response.

- Policy enforcement
- Sensitive code leak prevention
- Secret & credential leak prevention
- Prompt injection & jailbreak protection

HOST SCAN RESULTS BY CATEGORY

	Assets found (example)	Critical findings
AI/ML frameworks	2,308	72
AI SDKs	1,180	9
AI automation	296	6
AI agents	124	12
MCP servers	53	1
AI inference engines	40	2
AI gateways	25	28

4,026 unmanaged AI assets found

130 critical findings, ranked by severity

One monitored environment, Jul 26 to Sep 23, 2026. Tenant anonymized.

04 · BROWSER · HOSTS · CLI

Unified AI Visibility and Control

Browser activity, host-discovered AI assets and CLI coding agents all flow into one AccuKnox security workflow.

Browser · Hosts · CLI → **AccuKnox AI Security** — One security workflow →

Unified inventory

Managed and unmanaged AI assets in one view. Export as an AI-BOM in CycloneDX format.

Policy controls

Define data and usage policy once. Enforce it through the browser plugin and Prompt Firewall.

Audit records

Prompt, response and detection records for investigations, audits and compliance reporting.

BETA — **Desktop telemetry app.** Collects OpenTelemetry and HTTPS signals from desktop AI tools such as Claude Code to identify agents, tools and skills in use. github.com/kubearmor/otel-adapter
