

AccuKnox Product Roadmap

CIEM & DSPM

1. Cloud Infrastructure Entitlement Management (CIEM)

AccuKnox CIEM maps identities to entitlements to resources across AWS, Azure, and GCP using a graph-native engine (Neo4J + Cartography). It answers the question “who can access what” across all three clouds, with risk-scored findings, compliance mapping, and workflow integrations.

Current • Q3 2026 (In Progress)

Capability	Details
Graph-Native Identity Map	Accounts, roles, policies, and resources mapped across AWS, Azure, GCP via Neo4J + Cartography.
Unified IAM Inventory	Single-pane “who can access what” view across all three clouds.
6 Finding Categories	Privilege Escalation, Data Exfiltration, Resource Exposure, Service Wildcard, Credentials Exposure, Infrastructure Modification.
Risk-Scored Findings	Per-finding remediation steps with risk scoring.
Compliance Mapping	CIS, NIST, PCI, SOC 2 frameworks mapped out of the box.
Workflow Integrations	ITSM, Slack, Teams, and SIEM workflow integrations.
CISO Dashboards	Customizable dashboards and evidence export for audit.

Near • Q4 2026

Capability	Details
Non-Human Identities	Service accounts, workload identities, and K8s RBAC.
Cross-Cloud Escalation Paths	Privilege escalation path detection across clouds via graph traversal.
IaC Diff Output	Terraform / CloudFormation right-sizing PRs auto-generated per finding.
IdP Integration	Okta / IdP integration for effective-permissions resolution.

Far • Q1–Q2 2027

Capability	Details
AI Agent Identity Governance	Bedrock agents, Copilot Studio, MCP, LangChain service accounts.
CIEM + DSPM Correlation	“Which identities have access to sensitive data stores?” in a single query.
ML Right-Sizing	Continuous right-sizing recommendations + entitlement drift alerts.
Anomaly Auto-Suspend	Unusual access patterns trigger automatic session revocation.
CIEM + CDR Feedback Loop	Runtime identity anomalies surface in the CIEM console.

2. Data Security Posture Management (DSPM)

AccuKnox DSPM is GA: agentless onboarding in 15 minutes, 99.8% classification accuracy across 50+ sensitive data types. It discovers, classifies, and protects sensitive data across public, private, and hybrid clouds.

Current • Q3 2026 (GA)

Capability	Details
Agentless Discovery	S3, RDS, Azure Blob, GCS scanned with no agent and no code changes required.
ML Classification	50+ data types classified (PII, PHI, PCI, secrets) with ML-based detection.
Access Permission Mapping	Over-privilege detection per data store.
Compliance Framework Mapping	GDPR, HIPAA, PCI mapped with audit-ready report export.
Real-Time Risk Dashboards	Live dashboards + ITSM / SIEM integrations.

Near • Q4 2026

Capability	Details
Data Warehouse Scanning	Snowflake, BigQuery, Redshift, MongoDB.
Unstructured Stores	SharePoint, Confluence, Google Drive.
Shadow Data Discovery	Unmanaged data sources auto-surfaced.
Data Lineage Graph	Source to pipeline to consumer mapped across all stores.
Inline DLP Enforcement	Block unauthorized reads/writes to classified stores.

Auto-Quarantine	Unprotected sensitive files quarantined pending review.
------------------------	---

Far • Q1–Q2 2027

Capability	Details
DSPM + CSPM Attack Paths	Exposed bucket + classified PII = critical breach path.
DSPM + CIEM Correlation	“Who can access what sensitive data” in a single query.
DSPM + CDR Integration	Real-time exfiltration detection correlated with data classification.
LLM Compliance Narratives	AI-assisted compliance narrative generation for audit packs.
