About This Report

This report analyzes every software bill of materials (SBOM) registered under the 3 selected projects. It covers open vulnerabilities in each component, public exploit availability, remediation SLAs, fix versions and open-source license exposure. Each project gets an executive summary, a risk overview and a detail section for every BOM.

Confidentiality Notice

This document contains confidential and proprietary information for the use of Acme Corp only. Do not copy, disclose or distribute this report without written consent from AccuKnox.

PROJECT 1 OF 3

Customer Portal

4 BOMs in this project. Each BOM has its own detail section below.

CUSTOMER PORTAL

Executive Summary

Customer Portal registers 4 BOMs and 242 components. It has 101 open vulnerabilities, and 62 of them have a known public exploit.

Showing 15 of 33 fixable findings. Export the full list as CSV from the AccuKnox platform.

SBOM RISK REPORT

Methodology and Notes

How AccuKnox selects and classifies the source data in this report.

Data Sources

AccuKnox pulls the findings from its finding dashboard API for the 3 selected projects. The pull keeps component vulnerability findings and component license findings. Every BOM registered under a selected project is included.

License Obligation Tiers

License findings are grouped into Public Domain, Permissive, Weak Copyleft, and Copyleft tiers.

Severity and CVSS

Severity is the AccuKnox risk classification. CVSS is the base score from the advisory. Exploit availability shows whether a known public exploit is on record for the advisory.

Fix Guidance

The Fix to column names the remediation target from AccuKnox advisory data. See advisory means the advisory names no specific fixed version.

SLA Compliance

Each open finding carries a due date. Overdue findings are past that date. Due within 14 days marks findings that reach the date in the next two weeks.

Sample Data

This is a sample report. The customer, project and BOM names are fictional. Component, advisory and CVSS data come from real open-source scans.
